

1986 Taurus Wagon—None Quite Like It

When Ford engineers set out to redesign the standard American wagon, they had only an idea of what the final shape might be. Letting form follow function, the result was the impressive new aerodynamically designed Taurus Wagon. Its orthopedically designed seats comfortably accommodate six passengers—or eight with the optional rear facing third seat. For versatility, the rear seat (second seat) is a “60/40 split-fold” version, providing seating for two while allowing a portion of the seat to be lowered to accommodate long cargo such as skis. A high-strength plastic luggage rack with adjustable, integral flip-up cargo tie-downs is standard. And the Taurus Wagon incorporates Ford’s unique two-way tailgate, with an independently opening window. Taurus, available in L, GL, LX and sporty MT5 series...a thoughtful rendition of a new American wagon.
